¹ The computer science community traditionally considers scientific conferences as the primary venue for research dissemination and publication. In the computing community, top-tier conferences require a full-length paper submission, and the submissions are peer-reviewed by multiple reviewers. For example, the ACM SIGSPATIAL International Conference on Advances in Geographic Information Systems has an acceptance rate around 20% over the years. Other Student Advisement

My work has produced direct participations of students in computer science, data informatics, spatial sciences, geosciences, history, and communication through the research activities and my teaching efforts. Since 2013, I have directly worked with **45 students** in our Spatial Computing Lab. These students came from a variety of background and disciplines, including one local high school student, several visiting international students, and some USC undergraduate and graduate students in geodesign, electrical engineering, spatial informatics, computer science, and data informatics. I also

have a successful track record of working with under-represented groups. **One-third of the 45 research students are female students in engineering.**
